1. The VEB Warmetechnik manufactured three spot-welding machines in Oct 1953. The electrodes were procured in Germany (Federal Republic). Sixty fuel flowmeters were also manufactured and delivered to the Soviet Union.
2. The manufacture of hydraulic pumps for rockets has been in process since the end of August. The pumps deliver 18 liters per minute at 1200 revolutions and 180 atmospheric pressure. They are enclosed in a housing from which at the back end of the cylinder there projects a propeller about 10 cm long having a toothed rim, which provides the drive. The plans for these pumps were drawn by an Electricity and Power Machinery (EKM) bureau. About 30 pumps are being manufactured monthly and delivered to the Soviet Union. A larger model is scheduled for 1954.
3. The manufacture of breechblocks is no longer being carried on, for the time being.
